A · Fields form a map in every model, beyond the twin and beyond word form

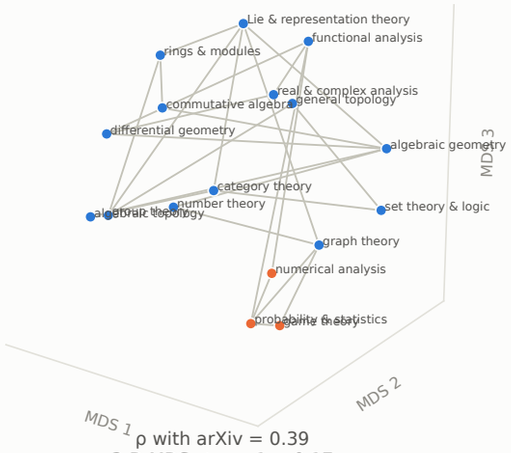

B · arXiv cross-listing (ground truth)

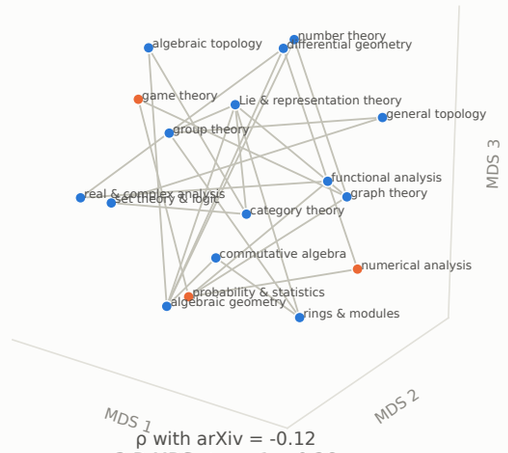

grey edges: each field's 2 nearest arXiv neighbours
3-D MDS stress-1 = 0.25

Qwen3.5-2B ★: related fields sit together

ρ with arXiv = 0.39
3-D MDS stress-1 = 0.17

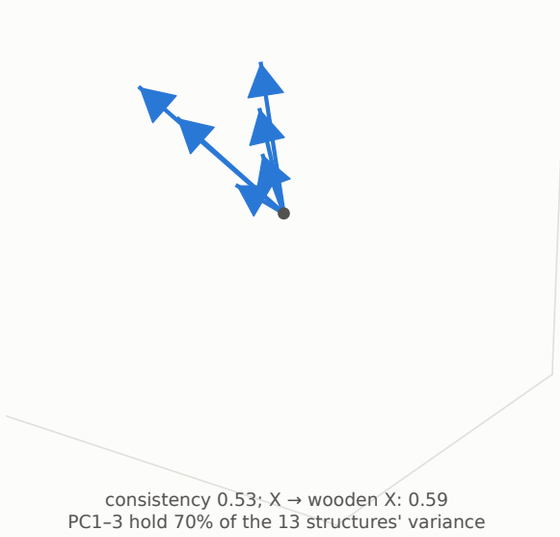

Its random-init twin: no map

ρ with arXiv = -0.12
3-D MDS stress-1 = 0.26

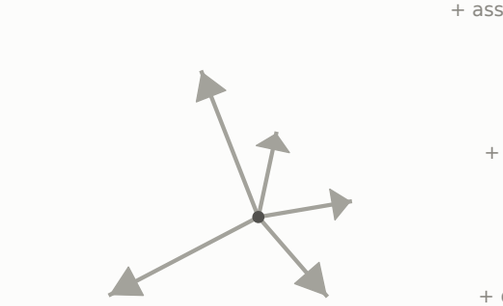

pure field
applied field

C · '+ commutativity' arrows from one origin Qwen3.5-2B ★

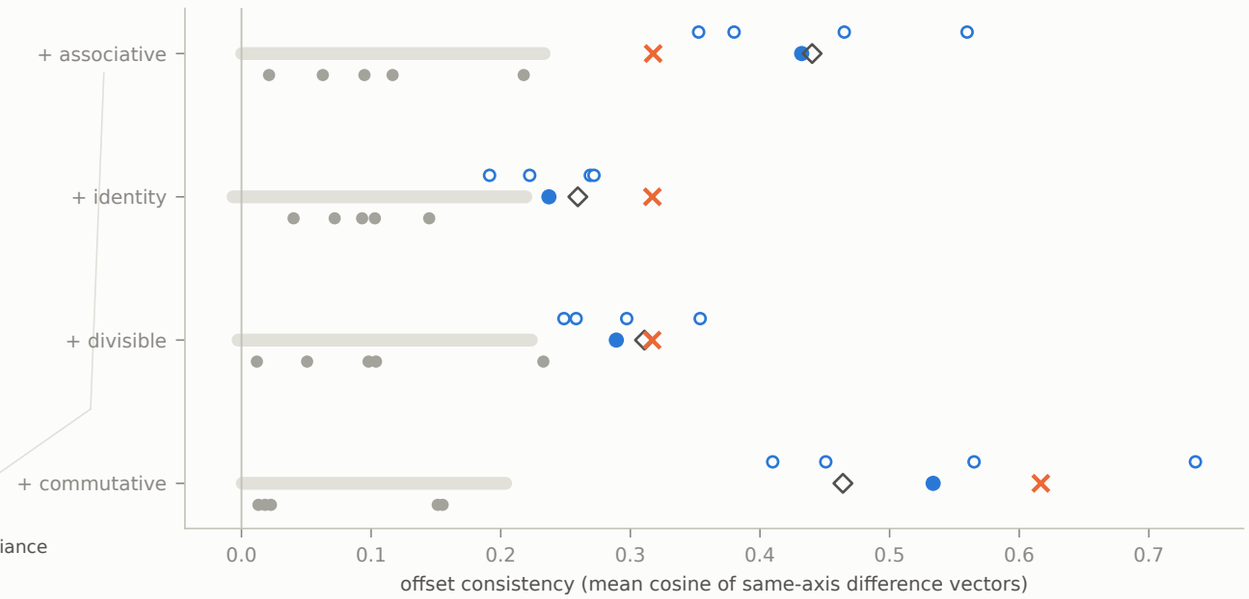

consistency 0.53; X → wooden X: 0.59
PC1–3 hold 70% of the 13 structures' variance

its random-init twin

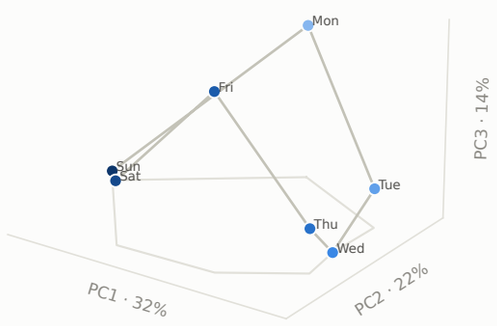

consistency 0.01
PC1–3 hold 52% of the 13 structures' variance

D · Offsets are more parallel than in the twins, but the names' spelling alone (×) is as parallel for 3 of 4 axioms

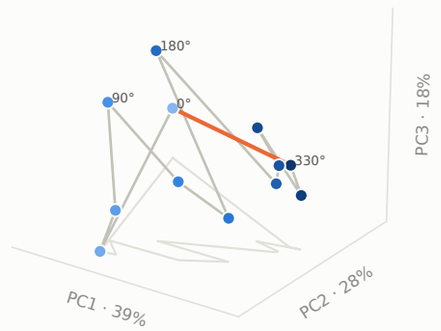

E · Days: a circle (positive control)

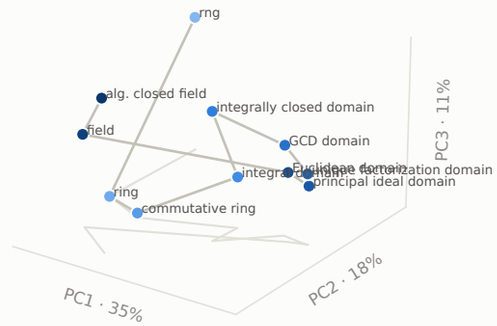

cycle score 1.00 (twin 0.14)

Angles: not a circle

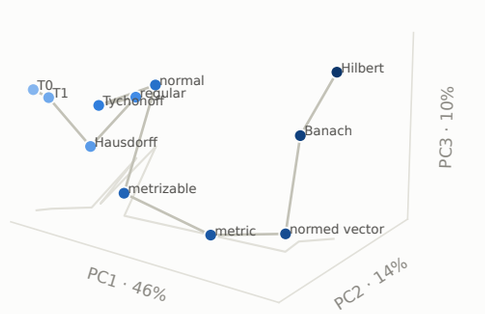

d(0°, 330°) = 2.11 × neighbour step (twin 0.80)

Ring chain: grouped by head noun

Robinson 0.52 (twin 0.30);
within the 6 '... domain' items p = 0.32

Space chain: an ordered path

Robinson 0.65 (twin 0.33);
within blocks p = 0.017 / 0.017
